

Energy Management System Policy

ORGANİK KİMYA
the chemistry between us

Energy Management System

Organik Kimya considers ensuring energy efficiency as an integral part of its operations. Our goal is to ensure the conscious use of energy without compromising the quality of our products. In line with ensuring and maintaining energy efficiency, the principles that Organik Kimya will apply throughout all its processes are as follows:

- To identify energy-related risks, develop preventive measures, and implement methods that eliminate hazards and inefficiencies in order to plan our production activities in harmony with the environment and prioritizing human health, based on the principle of continuous development and improvement,
 - To regard ensuring and improving energy efficiency not only as a legal obligation but as an integral part of our operations,
 - To consider and support environmental impacts and energy efficiency in the procurement of products and services as well as in the realization of new projects and investments,
 - To continuously improve energy performance and energy savings,
 - To fulfill our legal responsibilities related to risks that may arise during our activities and their connection to energy aspects,
 - To plan our development and implementation activities in a way that prevents potential environmental risks and reduces emissions resulting from energy use,
 - To continuously improve energy efficiency by reducing environmental pollution and ensuring the efficient use of energy and natural resources as an indicator of our sustainable development,
 - To communicate energy efficiency and environmental information related to our products and solutions to relevant individuals, institutions, and organizations.
- Ensuring and maintaining energy efficiency is the fundamental duty of all employees of Organik Kimya Sanayi ve Ticaret A.Ş.
